NetworkConnectLog is a small and portable network traffic monitor. You can count all computers that connect to the network and view additional details about their state. NetworkConnectLog Comments: NetworkConnectLog is a small and portable network traffic monitor. You can count all computers that connect to the network and view additional details about their state. NetworkConnectLog Compatibility: Windows XP, Vista, 7, 8, 10 How To Use NetworkConnectLog: Open NetworkConnectLog and click Connect button on the top right corner. In the Connect dialog, you should select the network type to which you want to add the computer. Enter a name for the computer. It's optional but highly recommended. You can modify the name later if you like. If you want to view events for more than one computer, you can add them one by one using the Add computer dialog. If you want to see all computers in the network, use the All computers tab. If you want to save the computer's state, use the Save state dialog. If you have added the computer to the list, click the View button. Select the computer's state from the left panel. You can use the Time menu to choose the event time. Click the Info button to view the selected computer's information. It's the same as for a single computer in step 3. When you are done viewing, click Close or save the current settings. Remove a computer from the list, or clear the saved state. NetworkConnectLog Screenshots: NetworkConnectLog is a small and portable network traffic monitor. You can count all computers that connect to the network and view additional details about their state. NetworkConnectLog Portable: NetworkConnectLog is a small and portable network traffic monitor. You can count all computers that connect to the network and view additional details about their state. NetworkConnectLog Installation: NetworkConnectLog is a small and portable network traffic monitor. You can count all computers that connect to the network and view additional details about their state. The program lets you monitor the connection of all the computers on your network, even if you have more than one connection to the internet. NetworkConnectLog offers more detailed information than any other program of this type. NetworkConnectLog is a portable application so you can take it with you on a USB thumb drive and run it from any computer without installing anything. It provides lots of features and its user interface is very intuitive. NetworkConnectLog is designed to

A small application that allows you to find out all PCs on your network that connect and disconnect from your network. This small application is based on NetworkConnectLog, a powerful yet easy-to-use solution that offers you a fast and direct way to find out all computers on your network that are connected and disconnected from your network. If you'd like to know how to find out all connected computers, then you'll be interested in this article. Main Features: •All events from last 24 hours, 7 days or 30 days are stored in log. •The exact time, computer name and workgroup are shown with each computer connection event. •The scanning can be easily controlled by using a right-click or hotkey. •The scan results are shown as a tree-structure. •A "Scan Settings" window allows you to control how the scan of the local network is performed. •The export results can be saved to TXT, HTML, XML or CSV formats. •There are options for changing the MAC address format, putting an icon in the system tray, showing time in GMT and hiding scanned IP addresses. •All entries can be exported as an image. •An easy to use interface. •The program does not create new entries in the Windows registry or Start menu, leaving the HDD clean after removal. •Portable apps do not create new entries in the Windows registry or Start menu, leaving the HDD clean after removal. •The exported results are printed to a TXT file. •Exporting can be done to all opened files. •Information from the last scan is automatically stored in a log file. •There are advanced settings allowing you to view events from specific days, to see an overview for a particular group of computers and more. Key Features: •The program is small and light on system resources, as there are no additional files or startup items to load. •The scan is done in two steps. First, the local network is scanned, then all computers found are scanned again. •The scan can be easily controlled by using a right-click or hotkey. •The scan results are shown as a tree-structure. •A "Scan Settings" window allows you to control how the scan of the local network is performed. •The export results can be saved to TXT, HTML, XML or CSV formats. •There are options for changing the MAC address format, putting

NetworkConnectLog is an app that can find out all the computers that connect and disconnect from your network. This small utility is portable and comes packed with an exporting function for generated information. Ads Feedjit Pages Favourite About Me I am a big fan of technology. I have been since I was in grade school, when I was given my first PC. I've always been a nerd. I think I'm funny, but if you don't believe me, check out my old posts or read the ten-year diary on my old site.Q: Is it possible to have an array of databinding converters? Is it possible to have an array of databinding converters?
