User-defined databases From the beginning, Autodesk made the AutoCAD For Windows 10 Crack database accessible to third parties. The first products were based on proprietary data format, which was called: The first file format was called "EDIF" (Eclipse Dbase Format). The definition of this file format is available on the web site of Autodesk. In 2005, Autodesk opened the AutoCAD database to the external customers. This database format was called "DWF", the acronym standing for Design Web Format. The description of DWF format is available on Autodesk site. The only drawback of this database format is that it is not file-compatible with other AutoCAD products.

Using DWF, in 2009 the first file format was available on public web site for third parties: Bcat2DWF. The description of this format is available on Autodesk website. The next format supported was DXF. DXF was compatible with DWF. Using DXF, the Autodesk product was possible to import information of other AutoCAD products. DXF was available in the web site and as a free download. Using DXF, many third-party applications were developed, like AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D, etc. Starting in 2008, Autodesk worked on a new internal file format: "APDF" (AutoCAD Application Data Format). This new file format was developed by Autodesk for its own products. It was originally compatible with DWF and DXF. Autodesk started to update the DWF to the version APDF in the next years. In 2010, Autodesk introduced a new file format for users. It is a modified version of DWF called "DWFF", the acronym standing for DWF File Format. DWFF is a standard file format for Autodesk products, and is compatible with other Autodesk products. The last modification of DWFF was in 2013. In 2013, Autodesk works on a new file format: "APDF-

P", the acronym standing for AutoCAD Application Data Format for Portable Devices. This file format will be used for Autodesk products that will be available for portable devices. In 2013, Autodesk launched the first cloud-based services that are based on the Autodesk data format. Cloud-based products are accessible via the web, iOS, and Android a1d647c40b
