Or 2) Can I add variables to my mysql.cnf that will allow me to increase the max_heap_table_size variable? A: From the docs: Note that setting the max_heap_table_size variable in the MySQL configuration file to a value that is greater than that available in memory can be dangerous; it may cause the server to consume so much memory that it is killed. This makes it sound like its not a supported scenario. You may be able to create another instance of MySql on the same EC2 instance with a different max_heap_table_size, provided you ensure the data from the first instance is backed up regularly. Q: Call for an app on the App Store I bought an application named "m3u tool" on the app store and forgot the password of the app. I tried to generate a new code but it did not work.
