File photo of former Chinese chief executive Tung Chee-hwa is seen at the Chinese Culture University in Beijing, China, October 28, 2016. REUTERS/Jason Lee Tung, 65, is the most high-profile official ever to be charged in the city. Hong Kong's leader, Chief Executive Carrie Lam, has avoided charges since Britain

handed the former colony back to China in 1997. His case could be difficult for the courts as much of the evidence is recorded on tape and his retinue of close supporters - including his daughter and an associate - are likely to be called as witnesses. Hong Kong's courts typically hear cases on the basis of written statements and any alleged wrongdoing is investigated by police. But many former chief executives in Hong Kong have resorted to buying up property, and paying for it in cash, for fear of a corruption scandal that might follow. What's New In ZHPDiag?

Connecting a corrupted Flash stick, accessing a website that includes a Trojan or a rogue or downloading malware from email attachments, are just a few examples of how your computer can get infected. ZHPDiag is a lightweight application designed to help you perform a comprehensive analysis of your system and detect Trojans, viruses, adware, PUP and other types of malware. Includes a straightforward and easy to navigate UI The program does not need an installation per se, but rather you need to agree to the terms and conditions to run it on your computer. Since the operation creates a shortcut on your desktop, the next you can access it from there the next time you need to run it. The interface is simplistic and user-friendly, so it is unlikely to give you any troubles. Although the splash screen features a Repair button, you should bear in mind that the main function of the utility is to scan your computer and provide you with a report on the potential infections that are plaguing your system. If you have trouble interpreting these reports, you can use LogAnalyzer. Provides you with a comprehensive analysis of your system Following the scan, the program provides you a summary of the adware, unnecessary toolbars, malware and other potentially unwanted programs that are found on your computer. Afterwards, you can take the necessary actions and use third-party cleaning or antivirus software solutions to clean your computer. Then again, the highlight of the application stems from the fact that it provides a detailed report on the scanned areas, components, registry keys, user profiles and other protocols that it investigates. The report is available in a plain text and includes the paths to the files that are explored. While it may not have the capability to clean then, at least you can access the directories where they are stored and keep a close eye on these sensitive areas that can be potential gateways for malware. A useful app for maintaining your PC clean of malware and PUP In the eventuality that you want to confirm or determine that malware is behind your computer's strange behavior, then perhaps ZHPDiag could lend you a hand.
