Many of the shortcuts, commands, and keyboard macros listed here are consistent throughout the entire program. You can usually find a shortcut that you'll be able to use by opening the main menu, choosing Help, and clicking on the Keyboard Shortcuts tab (refer to Figure 8-1). The Photoshop Help file contains extensive help materials that you can use if you find you need additional help. Look under the help folder in the main menu, choose Help, then click the Help menu, and then select Help Contents. Understanding Photoshop Elements You can use the familiar Photoshop Elements toolset to edit and create images from scratch in the integrated version of Photoshop, called Photoshop Elements 12. The Elements editor provides an intuitive interface for editing and creating from basic to advanced effects. The new Elements is a joy to use, and you can learn it quickly. Many of the tools in the Elements application are identical to those in Photoshop. And to save you even more time, the same keyboard shortcuts, toolbars, and menus that you use in Photoshop are available in the Elements application. You can download the necessary programs to install Elements in Chapter 5. Figure 12-1 shows the Elements application. **Figure 12-1:** The Elements interface is similar to that of Photoshop. Getting started with Elements Elements is a comprehensive program with all the standard tools of Photoshop plus additional tools for serious photo-editing and special effects. After installing the program, launch the Elements application, as shown in Figure 12-2, and choose Create a New Image from the File menu. You can then choose from the standard collection of backgrounds and color schemes, or you can create your own, by choosing Custom. You can then type a name for the image and click OK. **Figure 12-2:** Create a new image in the Elements interface. To add a new layer to your file, follow these steps: 1. Place the cursor over the white space of the document window and press Ctrl+Click (Windows) or Command+Click (Mac). The cursor changes into a layer icon, as shown in Figure 12-3, indicating that you're ready to add a new layer. 2. Choose Layer⇒New Layer. A dialog box pops up asking whether you want to add a new layer. When you're ready to proceed, click OK. 3. Choose a color from the color selection

The impact of local disease on bacterial translocation and sepsis in surgical intensive care patients. Bacterial translocation from the intestinal lumen into the peritoneal cavity is commonly observed in surgical intensive care patients. Twenty-two patients with clinically defined disease of the gastrointestinal tract were studied prospectively. Portal and peritoneal fluid cultures were obtained from each patient within 48 hours of the initiation of therapy and were assessed for the presence of bacteria. Strict protocols were followed to obtain specimens from each patient. The prevalence of bacterial translocation was similar in the patients with no gastrointestinal tract disease and in the patients with clinical disease of the gastrointestinal tract. However, patients with clinical disease of the upper gastrointestinal tract exhibited significantly increased prevalence of bacterial translocation. Sepsis developed in two patients with translocation but in none of the patients without translocation. The mean frequency of positive portal and peritoneal fluid cultures was 10% and 6%, respectively, in the absence of overt infection. This was significantly lower in the patients with disease of the upper gastrointestinal tract (16% and 12%, respectively), but no significant difference in frequency of positive cultures was observed between patients with diffusely diseased small intestine and patients with localized colonic disease. Translocation of bacteria from the gastrointestinal lumen into the peritoneal cavity appears to be related to the site of disease but not to the overall prevalence of intestinal translocation. Sepsis developed in only two of the 22 patients. On February 14, the night before 17-year-old Trayvon Martin was shot and killed by George Zimmerman in a gated community in Sanford, Florida, the Washington Post reported that the Harvard Law School Library has over 14,000 volumes about gun control. Last night, the library announced that its gun control documents are now part of its public domain. For the record, the library is the Harvard Law School Library – not the Harvard Law School. While the librarians at the law school do care a great deal about the issue of gun control, the library is one of the largest on the planet – and last year the International Herald Tribune reported that it has “one of the most extensive collections in the world.” As the IHT’s Irene de la Cuadra noted, the library has a lot of publicly available material on the subject and has been actively working to digitize its entire collection. So, the documents created by the library are now part of Harvard’s open source. If you want to dig in, you

[Diabetes insipidus, an unusual complication of severe hypercalcemia]. A 42-year-old man, admitted for nausea and vomiting during the first two days of hospitalization, was diagnosed with drug-induced hypercalcemia (plasma calcium levels at least 6.5 mmol/l). He recovered completely during the following 5 days without treatment; nevertheless, three months later he came to the outpatient clinic with diabetes insipidus, neurological symptoms and an increase of plasma calcium levels (to at least 9.8 mmol/l) after reinitiating the antiepileptic therapy. The patient was then admitted for further examination. Unilateral catheterization of the posterior pituitary gland was performed, revealing normal secretion of arginine-vasopressin. We discuss the value of drug-induced hypercalcemia as a cause of diabetes insipidus and review the literature. Initial funding for the site was provided by the U.S. Department of Energy, which allocated \$20 million. According to the Minnesota State Economic Development Assistance Authority, \$3 million of the funding will come from the state, and the remaining \$17 million is being provided by energy companies that generate electricity from Minnesota wind energy. “We’re still adding additional wind turbines to the site, so the number of turbines will increase as the project progresses,” said Bruce Ulland, the site manager for the Minnesota Wind Energy Center, which is overseeing the construction. The turbines will be built at a 60-turbine-tipped-height. During the construction phase, crews will use high-powered lights to illuminate the turbines, which can be viewed from surrounding roads. When the turbines are complete, the site will be further lighted at night using lightpoles as well as barges and aircraft, while also providing an informational brochure about the Minnesota Wind Energy Center to visitors who call in. A program is proposed to provide breast cancer patients with the clinical and radiographic data they need to be sure that their treatment will be matched to their needs. This is done by the integration of a breast cancer clinical program, a biostatistics program, and a breast cancer treatment program. The breast cancer clinical program is designed to permit the evaluation of new technologies and the testing of new approaches to diagnosis, prevention, and treatment, which may be implemented with a minimum of risk to the patient. It also provides an avenue for collecting primary data on a variety
