DbxConv is a simple command-line utility which is able to extract messages from Outlook Express and convert it to the standard MBOX or EML format. few steps. Another advantage of command-line tools is that they do not require installation, so the program files can be saved to any location on the hard drive, from where you can run the executable. Furthermore, you can copy DbxConv to a USB flash disk or similar storage unit, in order to run it on any computer with minimum effort. What's more, the utility does not add new entries to the Windows registry, Start menu, or any other area of the hard drive. Supported extensions and other available tweaks At initialization, you can view a list of available options and the usage pattern. It is possible to save all messages to MBOXO, MBOXRD or EML format, as well as make the tool always add a double newline at the end of a message and to ignore the case when replacing the "From" field. Plus, it can apply the send and receive dates as timestamps, and overwrite existing messages. Performance and conclusion As expected from a command-line utility, DbxConv is very light on system resources, running on low CPU and RAM. It has a good response time and carries out a task rapidly and error-free. We have not come across any issues throughout our evaluation. All in all, DbxConv offers a simple solution for MBOX and EML conversions. graphical app, you do not need a registered product key to run DbxConv and use its features. It takes about 3 minutes to convert the first 200 messages, while using a graphical app may take 10 minutes or more. Installation can be completed in only one click, and the app doesn't require any further action. Why I recommend DbxConv The tool has an easy-to-use interface and will be suitable for most users, since it will accept only entered messages in the text fields of a dialog box. Because of its use of low system resources and lack of any further interface, DbxConv will not bring any unwanted additional tasks to your system, such as hardware performance decline or other system slowdowns. Why I don't recommend DbxConv If you do not have a Windows account, this is not a good solution for you. Also, the program does not provide any option to run this task without using the administrator account.
