The technology is enabled within FIFA's more than 1.3 million lines of code and is geared specifically towards improving artificial intelligence, both on and off the pitch, on the pitch, as well as the overall balance of gameplay. "HyperMotion Technology" delivers a more intuitive experience for spectators and players alike. It reacts as real human players, based on what they do," said Alex Evans, Head of Player Intelligence at EA Sports. "The moment that a player makes a run down the right or an attacker cuts in, the technology automatically responds accordingly. EA SPORTS implemented this technology by analyzing players movements. Starting with the in-game kits and equipment, FIFA 22 presents players with a more authentic look based on real world statistics. Early in the gameplay engine, moving parts on in-game players like shoulders, arms, legs and eyes move in accordance with the running habits of real-world players. Watch the trailer above to experience the result. This new process allows EA SPORTS to design and create a more authentic in-game look that fits perfectly for the game's core audience - a passionate fan base that is constantly in search of more realism.
