A brief history of Photoshop Photoshop originated in 1987. Adobe System was founded by a Silicon Valley startup called Adobe Systems that was created by the document printing company Adobes and the software application company Macromedia. When Adobe Systems, the document printing company was sold in 1995 to Macromedia, the Adobe Photoshop graphic editing software was born. Until the release of Photoshop 7.0 in June of 2002, both graphic designers and photographers used dedicated graphics editing programs. Each had its strengths and weaknesses; Photoshop was sold on the premise that it was faster, easier to use, and had fewer limitations. I still use Photoshop Elements and I like it. It is a fast and powerful program that I recommend for both newbies and professionals. It is more specialized than some of the other options available. Why Photoshop for photo editing? If you use Photoshop for photo editing, you have likely chosen the right program. This is a professional-level graphic design program that is designed for both designers and photographers. You can design and photograph without having to open two programs. It is the only professional photo editing software that has roots in Silicon Valley. It focuses on the way the human eye interprets and perceives color, brightness, and contrast. A graphic designer uses Photoshop Elements to modify colors and contrast to fine-tune images before they are photographed. Photoshop has become known for its incredible asset library, which includes many stock photos, Adobe Stock, and royalty free images. You can use photos from many sites like Adobe Stock, Getty Images, or Shutterstock. With the ability to quickly import, edit, and save many different file types, you can edit an image from an e-mail, a smartphone or a USB drive. Raspberry Pi 3 as a Crash Course in Computer Scratch Programming “Ever since my school days I always wanted to learn a programming language, and now thanks to Pi and Scratch I can start working in this field.” – Ahmed M. Gharaibeh, Egypt, Read more There is no shortage of resources to help you get started with programming using the Raspberry Pi. The Wikipedia entry has a fairly good introduction, and there are many programs which have already been written to teach children as young as 5 or 6 to program. What, though, about teaching children who are a little bit older? The Raspberry Pi Foundation has recently announced its newest board, the Pi 3, which costs £10. This new board packs a significant boost in processing power, as well as new features. I'm sure that many parents and teachers will welcome this: a £10 computer, loaded with all sorts of different programs and activities, that can be used to learn about the computer system, as well as lots of other things. But there's a catch: the previous version of the Raspberry Pi, the Pi 2, was a pretty weak performer. It only supported Python scripting, and was barely fast enough to run a few programs. So it has now been superseded. Now Python programming is no longer an option. But it's still possible to get programming-ready on the Pi 2, and there are certainly some excellent programs and resources for this version. I've already blogged recently about the Write.Works website, which is a good programming resource for children, though one which is a little out of date. Another great site is Scratch, which is a graphical programming language which runs well on the Pi 2 and 3. This version has just been released – last week, in fact. It's still an early version, with some bugs to sort out. But it includes much of the functionality that Scratch will have once it's ready for use in schools. And it does so in a platform which is very easy to grasp, and which will allow children who want to learn to program to leap straight in. I've been using the scratch.mit.edu website with my 5 year old daughter, and it's been an interesting experience. She can pick up things pretty quickly, but it's clear that she's going to want to use more complex programs before long,

Rajmata Bhawani Devi Rajmata Bhawani Devi (12 February 1921 - 16 December 2002) was the younger sister of Maharaja of Jodhpur, His Highness Rao Man Singhji II of Jodhpur. She also held the title of "Sadhvi" (god-mother) of the Princely State of Jodhpur. She was born as Shiromani Sajjadi Devi on 12 February 1921 in Jodhpur, Rajasthan. She was the second eldest daughter of Mukesh Prajapati Sajjad-i-Hussein (a Persian nobleman) and Rajmata Jasmatiji Devi of Jodhpur. When she was two years old, her father died and her mother remarried with Rao Raja Ajit Singhji of Sirohi. In 1936, Rao Raja Sahib died and Rajmata Jasmatiji Devi was appointed the Regent of the princely state of Jodhpur. This made her as the younger sister of the Maharaja Rao Man Singhji II of Jodhpur. When she was six years old, Rajmata Jasmatiji Devi took over as the regent for young Maharaja Rao Man Singhji II, who was then 12 years old. During this time her relations with the new Maharaja were not very good. But now she is forgotten to the events of the reign of Rao Man Singhji II, who later became Maharaja of Jodhpur after his elder sister, Rajmata Veer Trimurti Devi, was declared Maharani of Jodhpur in 1934.
