The cytotoxic activity of 9-aminoacridine (9AA), a DNA intercalating agent, was investigated in a murine transplantable model. DLM-8 mouse tumor cells were injected subcutaneously in CBA mice. They were then treated either by 9AA at 24 h interval or by cyclophosphamide (CTX) at 24, 48 and 72 h. All treatments were stopped at 72 h. Tumor growth in 9AA-treated mice was significantly reduced. In contrast, CTX-treated mice presented rapid tumor growth and the antitumor effect of 9AA was not shown. 9AA induced profound depression of spleen and thymus weights with no specific effect on the tumor. Splenic cells, treated in vitro with 9AA for 24 h, killed DLM-8 target cells in a 51Cr release assay in a dose-dependent manner. Similar results were observed with CBA splenocytes; in contrast, this cytotoxicity was only partially reversed with PGE2. These results suggest that the cytotoxic activity of 9AA is due to the depressor activity exerted on the immune system without a specific effect on tumor cells.Nike SB Zoom Trucker “Child’s Play” The former comic book character Child’s Play has been the basis for several Nike SB sneakers.
