Ecomoviespapa provides you with the latest free movies on the net download.Q: What is the most efficient way to check file existence in Java? Assume I have a directory which contains: 1. test1.dat 2. test2.dat Assume that I have a method: boolean isExists(String path, String fileName) Where path is a path to the directory and fileName is a path to a file inside this directory. What's the most efficient way to check if this file exists? A: If you mean efficient as in fast - then your assumption is incorrect: The filesystem makes a distinction between files and directories - so you don't have to search the tree structure of a directory to check if a file exists. If you want to check if a file exists, just use this: boolean testExists() { File file = new File("C:\\some\\path\\to\\file"); return file.exists(); } In terms of performance, for huge numbers of files it's usually the better choice to store the path to the file in a database (no recursive

Awarapan hindi movie 480p free download Awarapan hindi movie 500k download Awarapan hindi movie watch online Awarapan hindi movie online free download Awarapan hindi movie online freeQ: Dynamically allocating an array of chars This is a simple static declaration of a string array (with an initial size, of course).
`class A { private: char str[20]; public: A() { } void set_str(char* newStr) { str = new char[20](); } char* get_str() { return str; } }`
I've already tried it with dynamic memory allocation, but I could not figure out how to get the dynamic allocation to work. Could you help me please? Thanks, Alexander
A: The dynamic memory allocation works like this: `char* str = new char[20];` There are a few issues with that: This allocates space for 20 chars, but the size of the data in str is limited to 20 chars. Memory management is not done automatically. You have to delete this memory, too. To create a class which works on top of dynamic memory allocation, you have to use `std::vector`, or `std::string`. You can use string literals in `std::string` to avoid the overhead of dynamic allocation. If you can, though, I recommend you use fixed size arrays.
Q: ssh connection refused I'm trying to connect to a server via ssh. When I try, the connection is refused. I have tried to open port 22 and checked that there are no other programs listening at this port. I used netstat and it shows that there is a sshd process which has blocked my port. What should I do now?
A: Check if the sshd process is running and listening on port 22. `netstat -ln | grep 22` Alternatively, you can try connecting to the IP address: `ssh -p 22`
Q: PostgreSQL: Sum of all integers with same Date My table called "mytable" looks like this:
`mysql> select * from mytable; +----+-----+ | id | date_of_`
